RISK ASSESSMENTS – GENERAL		
G-1	Cleaning up spillages of blood, vomit, urine	11
G-2	Vacuuming carpet and stairways	12
G-3	Cleaning inside windows, on top of shelving, high level items/areas	13
G-4	Cleaning of walls, floors and ceiling	14
G-5	Use and storage of chemicals	15
G-6	Changing light bulbs above 3m	16
G-7	Changing light bulbs throughout School or office	17
G-8	General child safety	18
G-9	Person suffering a known medical condition,	19
G-10	Use of electricity (general)	20
G-11	Legionella	21
G-12	Use of Stepladders	22
G-13	General Manual handling activities	23
G-14	Provision of first aid and medicine administration	24
G-15	Risk of Abduction, School security	25
G-16	Employment of young persons (under 18's)	26
G-17	Violence at work	27
G-18	Remote/lone working	28
SCHOOL		
S-1	Needles/sharps disposal	29
S-2	Childs Play	30
S-3	Use of machinery	31
S-4	Minor tidying of car park, entry areas and part of garden areas	32
S-5	Putting up displays within the School	33
S-6	Use of internal play equipment	34
S-7	Use of outdoor areas	35
S-8	Use of external play equipment	36
S-9	Use of water in play areas and water in the garden	37
S-10	Off-site visits	38
S-11	Driving and parking with children in a vehicle	39
S-12	Crossing the road to other site buildings	40
S-13	Challenging Behaviour	41
KITCHEN		
K-1	Descaling Kettles	42
K-2	Maintenance of Insectocuter	43
K-3	Use of knives	44
K-4	Cleaning kitchen equipment	45
K-5	Cleaning overhead canopy and filter	46
K-6	Use of ovens	47
K-7	Use of Microwave	48

K-8	Use of Dishwasher	49
F-1 FIRE	Prevention of and protection against fire	50
OFFICE		
O-1	Use of VDU equipment (Display Screen Equipment)	51
O-2	Use of general office equipment (guillotines, photocopiers, laminators, shredders)	52
O-3	Changing of toner cartridge in a photocopier	53
SPD-1 DIET	Dealing with children with food allergies	54
ADDITIONAL		
A-1	Indian Head Massage Therapy	55
A-2	Equine grooming & handling	56
A-3	Recreation & Break times at the park	57
A-4	Making a hot drink	58

1. POLICY STATEMENT

Our setting believes that the health and safety of children is of paramount importance. We make our setting a safe and healthy place for children, parents, carers, staff and volunteers by assessing and minimising the hazards and risks to enable the children to thrive in a healthy and safe environment.

This policy is based on the Learning Alliance risk assessment processes, which follow the five steps listed below:

1. Identification of risk: Where is it and what is it?
2. Who is at risk? (staff, children, parents, carers, cleaners...)
3. Assessment as to whether the level of risk is high, medium, low, taking into account both its likelihood and its possible impact.
4. Control measures to reduce/eliminate risk: What will you need to do, or ensure others will do, in order to reduce that risk?
5. Monitoring and review: How do you know if what you have said is working, or is thorough enough? If it is not working, it will need to be amended, or maybe there is a better solution?

Procedures

- Our risk assessment process covers adults and children and includes:
 - Determining where it is helpful to make specific written risk assessments in relation to particular issues, to inform staff practice, and to demonstrate how the setting is managing risks if asked by parents, carers or inspectors.
 - Checking for and noting hazards and risks indoors and outside, in relation to our premises and activities.
 - Checking for and noting hazards and risks in relation to substances that may be hazardous to health (such as cleaning or gardening chemicals) and where they are stored, in accordance with [COSHH regulations](#).
 - Assessing the level of risk and who might be affected.
 - Deciding which areas need attention.
 - Developing and recording a plan that specifies any actions required, the time-scales for action, the person responsible for the action and any funding required.
 - Recording any action taken following a review or incident.
 - Ensuring that we have instructions on what to do if any hazardous materials are spilt, ingested, or come into contact with eyes or skin. This information is often printed on the container, but otherwise [Chemical Safety Data Sheets](#) will be obtained from the supplier.

Legal Framework

- [Management of Health and Safety at Work Regulations 1999](#)

Further Information

- [Five Steps to Risk Assessment \(HSE 2006\)](#)
- [Control of Substances Hazardous to Health \(COSHH\)](#)

2. INTRODUCTION

The purpose of this risk assessment document is to identify hazards that may be present whilst conducting everyday tasks within Cornfields school and to help identify ways to control the risks associated with them. The school also completes risk assessments relating to trips/visits and individual pupil risk assessments where appropriate. The school holds a folder for visits/trips and individual risk assessments in addition to the day to day risk assessments contained within this document.

The hazards identified within this document are those associated with:-

- Children
- Equipment
- Tools
- Procedures
- Tasks
- Processes
- Other persons

These hazards have been analysed and assessed for the effects and consequences they may have. Factors considered include;

- WILL CONTINUING A PROCESS OR CONDUCTING AN ACTION RESULT IN INJURY?
- WILL USING A PIECE OF EQUIPMENT RESULT IN AN INJURY?
- HOW SEVERE WILL IT BE?
- WILL THERE BE ANY DAMAGE?
- WHO WILL BE AT RISK?

If a hazard is identified, the question of whether it can be controlled in any way to reduce the likelihood of injury or harm has been addressed. The risk assessment has identified control measures that may already exist to make a process safe or has identified proposed control measures to make a process safer. If this is not possible, then the risk has been rejected by changing a procedure or use of a certain piece of equipment.

A note to all Staff

"Significant findings" have been recorded in this risk assessment. This means anything that is key to you and your team to know. The control measures recommended and proposed must be used and monitored to ensure the risks are controlled. It will be necessary for staff to review the generic risk assessments on a regular basis (at least 12 monthly) to ensure that control measures are still being used and that work activities have not changed.

In addition, however, whenever work activities or equipment change, risk assessments should be reviewed and amended as necessary.

Should staff wish to conduct an activity which is not covered by a risk assessment found in this Policy, but it is felt it may pose a significant risk, then staff should complete a risk assessment using the blank form below, following guidance within this Policy and the Health & Safety Policy.

Staff need to identify what the activity or equipment is and all the likely hazards. It is also important to document all the controls necessary to conduct the task to prevent the hazard becoming a risk. Consider every aspect of control, from training to documented controls in the Health & Safety Policy for example: is equipment isolated? Should it be? Is signage appropriate? Add all of these controls to the Risk Assessment and ensure they are adhered to at all times.

3. GUIDANCE ON RISK ASSESSMENT AND REVIEW OF GENERIC RISK ASSESSMENTS

WHAT IS A RISK ASSESSMENT?

It is legally required that all tasks or activities undertaken as part of a work activity that present a significant risk to the health and/or safety of employees or other persons must be assessed in terms of risk.

The purpose of risk assessment is to determine all the potential dangers with the task or activity and to identify how likely it is that the dangers may occur, and to identify what can reasonably be done to avoid them.

A blank Risk Assessment form is included in this Risk Assessment Policy.

HOW SHOULD THE GENERIC RISK ASSESSMENTS BE REVIEWED?

Executive Head Teacher's responsibilities:

- The Risk Assessment Policy and each of the assessments must be reviewed on a 12 monthly basis by the appropriate Executive Head Teacher.
- Each of the generic risk assessments must be reviewed individually.
- The Executive Head Teacher must ensure that the generic risk assessments are applicable to the venue/operations and must identify any specific activities or tasks that are not sufficiently covered by them. For example, the generic manual handling risk assessment may not account for a disabled child in the schools care who needs to be lifted on a frequent basis.
- If any amendments are identified as necessary, the Executive Head Teacher is responsible for making these changes by hand to the hard copy at the premises.
- The Executive Head Teacher must sign the bottom of each risk assessment once this has been undertaken.
- Special requirements relate to the generic fire risk assessment in the Risk Assessment Policy – guidance on reviewing this is contained in the Site pack.

HOW TO REVIEW THE GENERIC HEALTH AND SAFETY RISK ASSESSMENTS (AND HOW TO COMPLETE A SITE-SPECIFIC RISK ASSESSMENT)

The Executive Head Teacher must work through the sections of each of the risk assessments in the Policy, thinking about the unit and the operation and how each task or activity is completed. The sections of the generic risk assessments should be considered as follows:

What are the hazards (dangers)?

The identification of all the hazards is a vital part of the risk assessment. Without recognising the dangers, it is very difficult to avoid them in a controlled way! Think about the task being considered and whether the generic risk assessment has covered all the foreseeable potential dangers associated with the activity at the unit.

Who is at risk from the activity? (Employees/others)

This should usually be the same for all units, but possibly tasks for example, such as deliveries/visitors, may potentially affect the children in some premises and not in others.

What are the risks from the hazards (potential outcomes from the hazards)?

This section should detail the potential damage or injuries to personnel (including staff, contractors, children), property etc. Detail the severity of risks before control measures are taken using the information in Section 4.0 of

this Policy. Likelihood of the risk occurring and severity of outcome before the control measures are implemented should be detailed.

How do we control these risks (control measures)?

This section should identify all measures reasonably needed to control the risk to the health and safety of persons or property in the task or activity being considered. Closely read these during the review and consider whether there is anything else needed to manage the hazards.

The aim of the risk assessment is to reduce the possibility of accidents and to manage the consequent risks inherent in the task. Further guidance on the "Risk Factor" is found below.

Unless a process or equipment change the hazards will still be present. The risk assessment is designed to ensure that the hazards are managed and controlled so that the risks are reduced to an acceptable safe level.

What is the likelihood of the risk occurring and the severity of the outcome "Risk Factor"?

This is quantified by the terms high, medium and low – this is decided for each task/activity before and after the 'control measures' have been introduced to help reduce and/or avoid the risk. Make sure anything in the unit or operation that alters the likely level of risk is considered, including frequency of the operation or any particular hazards to the School e.g. – medical conditions.

References

This makes reference to other information such as procedures in the Site pack. This information must be available.

Who prepared this risk assessment and when?

This will detail the date of original completion of the Risk Assessment Policy. The Executive Head Teacher will then review these 12-monthly and sign each risk assessment once completed, to ensure they apply to the school activity specifically.

What next?

Once the Executive Head Teacher is familiarised with all the risk assessments, they must ensure the significant findings are brought to the attention of all relevant staff. An induction checklist in the Site pack is available to help do this.

REVIEW OF GENERIC PREGNANCY RISK ASSESSMENTS AND COMPLETION OF FURTHER ASSESSMENT FORM

The Risk Assessment Policy contains the generic risk assessments for pregnant and breastfeeding mothers and also 'new mothers' who have given birth in the last six months.

The assessment form with the generic risk assessment for pregnant workers must be completed at the beginning of each 'trimester' period of pregnancy. This means when the employee first advises Cornfields school of her pregnancy, and then at the beginning of each trimester period of her pregnancy e.g.:

- 0-3 months
- 3-6 months
- 6-9 months

If it is a new mother and/or she is breastfeeding, then the assessment form will have to be completed every three months and always on return to work from maternity leave, until six months after the birth.

4. DEFINITIONS

INTRODUCTION

When carrying out a risk assessment it is the overall risk factor, which must be determined. Each generic risk assessment has a risk factor of LOW, MEDIUM or HIGH. In order to determine the risk factor, it is necessary to assess the probability and severity of the hazards associated with the activity and also any control measures which may already be in place. Therefore, the overall risk factor is an indication of how likely it is that a hazard will occur.

- Hazard a danger/something which may cause harm associated with the activity (e.g. cut finger – death).
- Likelihood the chance of something happening (e.g. unlikely – very likely).
- Significant Risk the potential result if a hazard has not been controlled (e.g. laceration, personal injury, fire, entrapment).
- Severity also referred to as the consequence or level of harm/disruption that would ensue from the hazard.
- Control Measures when initially carrying out the risk assessment it is the control measures which are already in place, which need to be considered.

Once the assessment is complete further control measures may be identified and these too must be recorded.

RISK RATING GUIDE

Use the ratings High, Medium and Low to assess the Hazard Rating and the Likelihood Rating.

NB – The likelihood of a hazard occurring must be considered in conjunction with any control measures already in place.

Examples

- 1) Crossing a busy road with children is a hazard and the probability of being run over is extremely high, with the severity of injury very high as one could be killed or severely injured. The Hazard Rating is therefore HIGH. However, with correct supervision and all control measures in place and being adhered to, the Likelihood Rating is LOW.
- 2) The chances of a child slipping on a wet floor are quite high (likelihood) but the severity of their injury can vary from broken limbs to bruising to no injury. In such cases the Hazard Rating is MEDIUM. But, if the floor is mopped dry, the likelihood of slipping falls considerably, although the sort of injury will remain the same. So the Hazard Rating is Medium and the Likelihood Rating is LOW (if best practice is followed).

Hazard Rating	Likelihood	Residual Risk Rating and Action if required
HIGH	HIGH	High Risk, unacceptable – immediate attention
HIGH	MEDIUM	High Risk – action to be taken
HIGH	LOW	Low Risk, follow control measures to maintain Low Risk
MEDIUM	HIGH	High Risk – action to be taken
MEDIUM	MEDIUM	Medium Risk – attention required to improve control measures
MEDIUM	LOW	Low Risk
LOW	HIGH	Medium Risk – attention required to improve control measures
LOW	MEDIUM	Low Risk
LOW	LOW	Low Risk

Risk Rating:.....

Task/Activity	Who is at risk?	Who needs to know?

Who prepared this risk assessment:

Date:

When does the risk assessment need to be reviewed? Every three months for Children
 For everything else: twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Details of reviews or amendments	
Date of review/amendment	Carried out by

GENERAL

Ref: G-1

Residual Risk Rating: Low

Task/Activity	Who is at risk & who needs to know about the activity
Cleaning up spillages of blood, vomit, urine etc	All Staff, people in vicinity e.g. children, visitors, carers

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Blood Urine Vomit Body fluids Faeces	Infectious diseases Slips

How do we currently control these risks?
<ul style="list-style-type: none"> * Personal protective equipment provided as per COSHH requirements and worn. * Staff provided with training on infectious disease control procedures. * All staff trained in chemical safety and knowledge of COSHH Manual and assessments. * Wet floor signs displayed as soon as possible. * Spillages cleared away immediately – children kept away from area until dry. * Use the Infection Control Kit, using individual sickness kit bags. * All items excluding clothing must be placed in clinical waste bag and disposed of in the correct bin. * Soiled clothing rinsed off and placed in sealed bags. * Staff trained in safe working practices where applicable. * Staff training reviewed on an ongoing basis.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed? (3 months for children & staff) & Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Task/Activity	Who is at risk & who needs to know about the activity
General manual handling activities	All employees, staff in the vicinity, staff carrying out task, children, carers, visitors, contractors

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Moving heavy or awkward shaped objects Lifting items manually	Injury. Injury to others. Damage to equipment/floor etc

How do we currently control these risks?
<ul style="list-style-type: none"> * Training in manual handling and specific areas – where necessary. * If object is too heavy for one person, ensure two people lift (always assess before lifting). * Allow adequate space around object to be moved to allow easy access and remove the need to over-stretch (use second person to open doors etc where necessary). * Provision of trolleys and lifting devices where appropriate. * Staff trained in Health and Safety, and safe working practices where applicable. * Regular monitoring of lifting activities. * If having to open doors etc have someone else available to open them for you. * If going up or down stairs ensure safe practices observed. * Assess item to be lifted for other hazards such as chemicals and glass and take necessary precautions. * Assess route and environment and ensure safety before commencing task.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.	
Details of reviews or amendments	
Date of review/amendment	Carried out by
As per Risk Assessment Policy header page	Executive Head Teacher

Task/Activity	Who is at risk & who needs to know about the activity
Provision of first aid and medicine administration	All first aid trained staff, children, staff and visitors

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Untreated injuries requiring first aid may become worse Infectious disease Unsuitable treatment	Reaction to medicine Reaction to bandage or plaster Over-medicated Incorrect medication Incorrect treatment

How do we currently control these risks?
<ul style="list-style-type: none"> * Full first aid kit on site. * Staff trained in safe working practices where applicable. * First aid trained staff on site. * All staff made aware of first aid policy on induction. * Comprehensive medicine procedure to be followed. * First aid staff to administer first aid. * All relevant medical and consent forms completed. * All medication to be administered by a qualified member of staff.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.	
Details of reviews or amendments	
Date of review/amendment	Carried out by

Task/Activity	Who is at risk & who needs to know about the activity
Violence at work	All - particularly staff and management, children, carers, visitors and contractors

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Violent, aggressive carers and visitors Emotional situations e.g. disciplining person at work Children being violent	Personal injury Stress

How do we currently control these risks?
<ul style="list-style-type: none"> * Manage confrontational situations – management to receive training where necessary. * Staff training on violence and dealing with aggressive situations. * Senior member of staff on duty at all times. * Communication to be regular, open and honest to reduce the risk of confrontational situations developing. * School provided with security perimeters and door entry systems where necessary. * Should a situation escalate and a member of staff feel intimidated or unsafe by a parent or visitors conduct, then a staff member should call upon the and unsafe a senior member of staff should contact the local community support officer.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.	
Details of reviews or amendments	
Date of review/amendment	Carried out by
As per Risk Assessment Policy header page	Executive Head Teacher

Task/Activity	Who is at risk & who needs to know about the activity
Remote/lone working	Carers, all staff, persons working alone and contractors/cleaning staff (employed)

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Dependant on location (being alone) e.g. starting early, working late	Employee suffering personal injury and unable to call for help Entrapment in isolated area Working alone in area where fire alarm is not audible

How do we currently control these risks?
<ul style="list-style-type: none"> * Staff working in pairs wherever possible. * Always advise colleagues of whereabouts. * Staff to carry out regular checks on staff in these areas. * Review any areas where staff may work alone and define arrangements for alerting to fire/other emergencies. * Provision of mobile phone or other communication system wherever situation demands this as a necessary control.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Task/Activity	Who is at risk & who needs to know about the activity
Cleaning overhead canopy and filter	Catering staff, people conducting task and people in the vicinity

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Overhead work/heights Chemicals	Fire Burns Chemical burns Inhalation Falls from heights

How do we currently control these risks?
<ul style="list-style-type: none"> * Ensure that the floor is clean and dry so that the ladder is secure. * Restrict access to the area. * Use warning signs to ensure other staff are alerted to the task. * Complete the task when food is not being prepared. * Ladders provided and maintained in good order (see ladder safety). * Knowledge of COSHH Manual and assessments relevant to role. * Personal protective equipment provided as per COSHH requirements and worn. * Staff trained in cleaning of filters/canopy. * Filters cleaned weekly and replaced before switching on equipment. * Staff to wear suitable footwear where appropriate. * All equipment to be turned off and cooled down before cleaning starts. * Staff trained in safe working practices where applicable. * Ducting to be cleaned by a competent contractor on a regular basis.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.	
Details of reviews or amendments	
Date of review/amendment	Carried out by
As per Risk Assessment Policy header page	Executive Head Teacher

Task/Activity	Who is at risk & who needs to know about the activity
Use of ovens, grills (i.e. cooking equipment), kitchen equipment	Catering staff and Teachers, people conducting task, people in vicinity and visitors

What are the hazards (dangers)?	What are the potential outcomes (risk)?
High temperatures Grill Hot oil Spills Oven Hot water Steam Kitchen equipment Naked flames Gas release	Fire Burns Slips Scalds Bruising

<p>How do we currently control these risks?</p> <ul style="list-style-type: none"> * Staff to use oven cloths or oven gloves for handling hot objects. * Kitchen design to minimise risk of burns (height of equipment etc). * Fire blankets and extinguishers available and serviced regularly. * First aid equipment available in the kitchen. * Ensure oven gloves/cloths are dry prior to use. * Minimise travel distance whilst handling hot food and liquids. * Visitors to kitchen to be made aware of areas of safety (i.e. areas not in cooking zone). * Long hair and trailing clothing to be held back so it cannot catch fire or be entrapped. * Staff trained in Health and Safety and safe working practices where applicable. * Replacement of fire fighting equipment and first aid equipment when used. * Replace gloves and cloths when no longer effective. * Staff to wear suitable footwear.

FIRE

Ref: F-1

Residual Risk Rating: Medium

Task/Activity	Who is at risk & who needs to know about the activity
Prevention of and protection against fire	All, everyone on the premises (children, carers and visitors)

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Fire Open fire doors Obstructed fire escape routes Inadequately maintained fire fighting equipment and alarms Faulty electrical appliances and wiring Combustible materials	Fire Smoke Toxic fumes Burns Death Property damage

How do we currently control these risks?
<ul style="list-style-type: none"> * All equipment purchased with suitable hazard rating. * All staff notified of fire procedures and safety on induction. * Staff trained in fire safety and prevention on annual basis. * All fire routes to be kept clear and fire doors closed. * Regular checks by Teachers to assess fire safety. * Staff familiar with their roles and responsibilities in the event of fire. * Staff familiar with special precautions in the event of fire i.e. children, disabled access evacuation etc, notifying remote working staff members, who calls fire brigade etc. * Weekly checks on emergency lighting and recorded in fire log book. * Regular full evacuation drill of building and recorded in fire log book. * Staff trained in specific requirements to ensure the safety of the children in the event of an evacuation. * Keep fire exits clear. * Maintain fire fighting equipment in correct locations and with yearly servicing. * Weekly fire alarm tests. * Ongoing inspection and hazard identification and control. * Daily checks by Teachers to ensure fire exits clear.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

OFFICE

Ref: O-1

Residual Risk Rating: Low

Task/Activity	Who is at risk & who needs to know about the activity
Use of VDU equipment (Display Screen Equipment)	All staff.

What are the hazards (dangers)?	What are the potential outcomes (risk)?
VDU screen Repetitive hand movements on keyboard Furniture and surroundings	Eye strain Headaches Repetitive strain injury Epilepsy Upper limb disorders Back pain

How do we currently control these risks?
<ul style="list-style-type: none"> * Assessments of VDU undertaken in accordance with the Health & Safety Policy. * Frequent breaks to be taken (VDU work to be interspersed with other activities). * Correct posture used whilst working at a VDU – staff trained. * Adjustable equipment provided where necessary – in accordance with VDU assessment. * Ensure display is clear and legible (i.e. no flickering characters, colour and brightness can be adjusted, screen is free from reflective glare). * Keyboard can be tilted, is made of matt surface, provided pad for hands where necessary. * Provide suitable environment, adequate lighting and temperature. * Advice note on correct positioning provided for non VDU ‘users’. * Eye tests provided for all defined ‘users’ of VDU’s (refer to the Health & Safety Policy). * Foot rests provided where necessary. * Individual risk assessments for VDU use – reviewed regularly and whenever equipment is relocated.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.	
Details of reviews or amendments

Task/Activity	Who is at risk & who needs to know about the activity
Use of general office equipment (guillotines, photocopiers, laminators, shredders etc)	All staff, those using equipment and others in vicinity - contractors, carers, visitors, children

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Electricity Sharp blades Height and weight of equipment Moving parts	Electrocution Electric shock Injury

How do we currently control these risks?
<ul style="list-style-type: none"> * Restrict access to area so that children cannot gain access to the equipment. * Warn others in the area to dangers. * Staff trained in safe working practices where applicable. * Site equipment on suitable tables (where required) - stability and height must be considered. * Purchase equipment that is safe to use. * Monthly visual checks to ensure that the wire and plugs to the electrical equipment is in good condition. * Yearly electrical checks by a competent person to ensure the safety of the equipment. * Keep all long hair and trailing clothing away from machinery such as the guillotine and shredder.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?	
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Special Dietary Requirements

Ref: SPD-1

Residual Risk Rating: Low

Task/Activity	Who is at risk & who needs to know about the activity
Dealing with children with food allergies	Executive Head Teacher, Staff, children and others in the vicinity

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Consumption of item allergic to and reaction	Anaphylactic shock Rash Swelling Wheezing Allergic reaction Death

How do we currently control these risks?
<ul style="list-style-type: none"> * Thorough knowledge of allergy and reaction type obtained from the carers, including medical verification – information disseminated to all relevant staff before the child commences at the School, and then on an ongoing basis. * Control of food in the kitchen to ensure that the food for the child with the allergy is not contaminated with the items providing the allergen. * Regular updates with the carers on care plan – carers advised that they are equally responsible for updating the School in writing of any developments. * Accurate information of the ingredients of brought in products with allergen information to be compiled.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Indian Head Massage

Ref: ITM

Residual Risk Rating: Low

Task/Activity	Who is at risk & who needs to know about the activity
Indian Head Massage Therapy	Executive Head Teacher, Staff, Children and others in the vicinity

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Slip Trips from Liquids	Injury from slipping over

How do we currently control these risks?
<ul style="list-style-type: none"> * Therapist is professionally trained * Therapist has a current DBS certificate * Consent form is always signed by a parent first and any allergies are noted at this point * Products used are not kept on site * Massage therapy is always 'over clothes' * Has use of a Therapy room * Equipment used is checked before each visit and is not considered a danger to pupils or others * Therapist is aware of responsibility of and process for reporting any concerns

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.

Equine Grooming & Handling

Ref: EGH

Residual Risk Rating: Medium

Task/Activity	Who is at risk & who needs to know about the activity
Equine Grooming & Handling	Executive Head Teacher, Staff, Children and others in the vicinity

What are the hazards (dangers)?	What are the potential outcomes (risk)?
Horse bites/kicks Trips/slips	Injury sustained from the horses May sustain cuts, bruises or grazes from trips, falls and slipping over

How do we currently control these risks?
<ul style="list-style-type: none"> * Only one pupil to approach the horse at a time * Children to follow instructions * Supervision of children at all times * Monitoring of children to ensure behaviour doesn't increase risk of harm.

Please identify any site-specific hazards associated with this task and list any additional control measures taken or necessary.

When does the risk assessment need to be reviewed?
Every twelve months, or whenever any of the premises circumstances change or any equipment relevant to the task is changed etc.
